

# Blender – Fundamentals of Modeling

## Section 2 – Mesh Editing

### Loop Selection

Description	Command/Icon
<b>Mini Menu</b> You can parameterize a new mesh by expanding the mini menu and changing properties of the mesh.	 <i>Figure 1 – Mini Menu for the Torus</i>
<b>Pick Shortest Path</b> Selects a segment of edges, selecting all edges on the shortest path between two selected edges	Select an Edge, then CTRL + Left Click on another Edge
<b>Select Edge Loops</b> Selects a loop of connected edges	Select -> Select Loops -> Edge Loops, ALT + Left Click on an Edge
<b>Select Edge Rings</b> Selects all adjacent rings in a mesh	Select -> Select Loops -> Edge Rings
<b>Select Adjacent Edges</b> Selects adjacent edges to the selected edge	CTRL + ALT + Left Click on an Edge
<b>Merge Vertices at Center</b> Merges all selected vertices at their geometrical center	M -> Merge: At Center
<b>Merge Vertices at Cursor</b> Merges all selected vertices at the location of the 3D Cursor	M -> Merge: At Cursor
